

Orders Application

WWT's upgraded Orders application contains several changes for our users to be aware of, including the following:

- A new configurable search view (Grid Preferences) allows users to set their personal preferences for the data columns displayed on their search page, as well as column sequence
- To allow users to more quickly access the most relevant order data points, the layout of an order's details has been improved to reduce clicks and scrolling
- Application performance has been optimized to improve navigation and response speed
- Order information contained within the order header has been condensed and simplified
- Users can now choose to use the application's "dark mode" display to reduce eye strain and improve readability

Contact your WWT representative for any questions you have about the Orders application.
