

# ROBOTIC PROCESS AUTOMATION STRATEGY

World Wide Technology’s (WWT) public sector automation experts develop and implement Robotic Process Automation (RPA) solutions to extend the capability of workforces and demonstrate the value of automation programs.

WWT’s experts go beyond task automation by leveraging the industry-leading UiPath hyperautomation platform, which transforms RPA into an enterprise solution. Among the benefits of WWT’s UiPath solution are:

- **Proven performance:** More than 7,000 UiPath customers, including 72 DoD and Civilian agencies.
- **Faster ROI:** An RPA platform that can demonstrate ROI in weeks to months and provides a governance model that prioritizes automation.
- **Artificial Intelligence (AI) and Machine Learning (ML):** Integrated AI/ML capability or interface with existing platforms for a smarter automated workforce.
- **Trusted counselor:** Guidance and support for stand up of a Robotics Operations Center.

## A Solution Made Possible Only from the Industry’s Premier System Integrator and the Leading Hyperautomation Platform

WWT has thousands of engineers and technical resources and business partnerships with major technology providers. WWT’s Advanced Technology Center (ATC) delivers hundreds of technology companies into one environment and provides virtualized labs that are accessible to our customers, partners and employees worldwide. WWT leverages the UiPath platform to deliver industry-leading automation to help organization services teams reach their full potential with digital technology that is economical, ethical and transparent. UiPath is an enterprise RPA solution that supports the government’s current “automation first” efforts from identification through implementation to demonstrable results.

UiPath is the #1 Fastest Growing Company in North America on Deloitte’s 2019 Technology Fast 500.

Discover automation opportunities powered by AI and your people

Build automations quickly, from the simple to the advanced

Manage, deploy, and optimize automation at enterprise scale

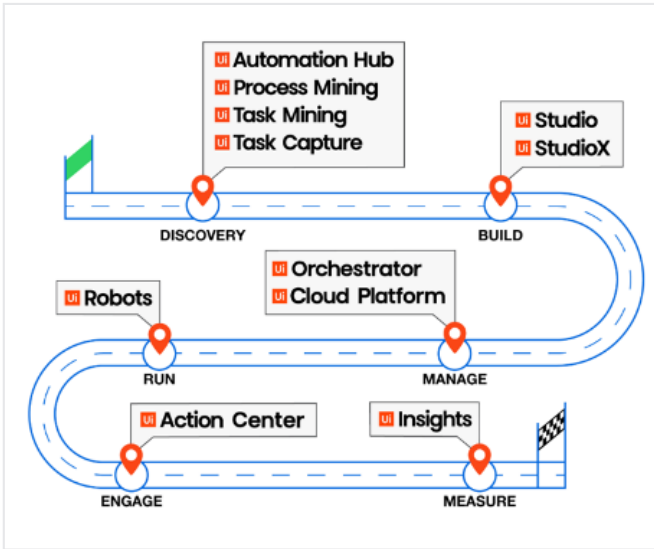

Run automations through robots that work with your applications and data

Engage people and robots as one team for seamless process collaboration

Measure operations and performance to align with business outcomes

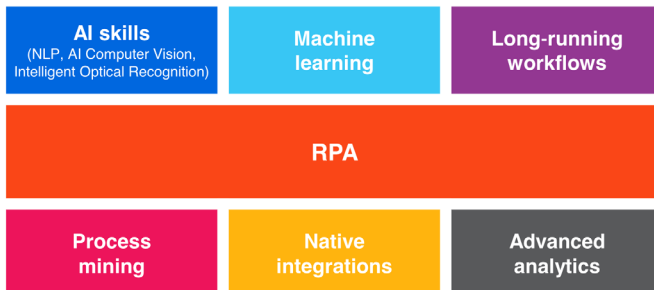

## Hyperautomation: More to Automation Than Offloading Repetitive Tasks

Hyperautomation enables an organization's ability to manage and accept user input for multi-step automations with UiPath Apps & Action Center to combine the benefits of Attended and Unattended Automations. Other benefits include:

UiPath Hyperautomation From Start to Finish

- Discover candidates for automation with Process Mining and Task Mining
- Define and prioritize automations with Automation Hub and Task Capture
- Democratize and centralize development with Developer Studio and Studio X
- Monitor, manage and scale to enterprise level with orchestrator to provide dashboards, queues, assets, logs, environments, tenants, user and robot permissions
- Include KPI to create metrics that show business value and ROI using UiPath Insights
- Leverage AI and ML

The UiPath Hyperautomation Platform

## UiPath Robots Deliver:

**Rapid Results:** Users can record and create automations. Developers have access to 300+ drag-and-drop activities, recorders and templates. Administrators can deploy and scale quickly with shared components, configuration and upgrade tools and centralized license management.

**Skilled Robots:** UiPath supports a wide set of applications. Robots can work unattended, with humans in the loop or in hybrid modes. WWT's leading Computer Vision technology reads screens and documents in a humanlike manner and improves over time.

**Defense-Grade Security:** The UiPath Platform is certified ISO 27001 compliant and Veracode Continuous, the highest level of the Veracode program certification.

**Drag-and-Drop AI:** Bring your own ML models or easily deploy native or partner-built AI skills using AI Fabric, Computer Vision and Natural Language Processing.

**Scalability:** UiPath's proven, scalable architecture is deployable on-premises or in the cloud and supports DevOps approaches to create, deploy, manage and share workflows across large teams.

**Transparency:** Attended robots provide user control while log files capture every robot action. Drag-and-drop AI enables agencies to choose the most responsible models; Insights provides robust alerts and dashboards to illustrate ROI.

## Think Automation First with WWT and UiPath

Augmenting your organization with automated workers is cost effective, and automating repetitive, high-volume tasks increases efficiency and accuracy. Organizations can free up resources to focus on high-value work with a "robot for every person" approach. Automation protects organizations from brain drain due to retirement. Additionally, automation adds connectivity and extends the life of legacy applications without rework and retraining.

By choosing WWT's UiPath RPA solution, organizations are assured the combined strengths and capabilities of two industry leaders dedicated to providing the best possible hyperautomation platform and support. WWT is a UiPath Silver Partner with trained and certified resources producing results for mission-critical applications in unique environments, including the DoD.

### Get started today! WWT is ready to provide world class support with engagement options that include:

- Automation Workshops
- License purchase and installation
- RPA Jumpstart: 1-3 Automations in 1-3 months
- Enterprise Service Engagements with long-term embedded resources
