

WEEE: World Wide Technology is committed to develop and participate in initiatives to correctly manage end-of-life products and materials when they become waste. Around the world, some countries have developed e-waste or WEEE (Waste from Electrical and Electronic Equipment), battery, and packaging legislation to ensure that systems for collection, treatment and recycling of these materials are in place. World Wide Technology is committed to meeting the requirements of these laws. Please contact us for questions or more information at Ewaste@wwt.com. You can find producer registration numbers below.
