EXECUTIVE OVERVIEW

Speed of delivery, cost containment and managing heterogeneous environments are key Information Technology (IT) challenges that customers can address through the Software-Defined Data Center (SDDC) and integrated cloud infrastructure solutions. WWT’s VMware® vRealize Automation™ (vRA) Workshop is designed to provide IT administrators and architects with the tools required to implement software that can provision multi-cloud, multi-vendor infrastructure and applications for private, public and hybrid clouds. VMware vRA provides consistent, automated delivery and management of IT services, which reduces time-consuming manual processes and offers solutions for governance, cost containment and business agility.

OBJECTIVES

The WWT VMware vRA Workshop is a two-day class with hands-on labs that takes an architectural deep dive into vRA. Participants learn about real-world use cases that apply to everyday data center concerns. They receive a live demonstration hosted through the WWT Advanced Technology Center that covers how to embrace multiple clouds through a multi-tenant solution using heterogeneous hypervisors. During the workshop, experts detail the financial benefits of using VMware vRealize Business and provide participants with a working knowledge of major components of vRA such as blueprints, approval policies, reservations, advanced services and more.

BENEFITS

This workshop gives your organization the opportunity to discuss challenges faced in the data center, as well as IT goals and requirements with WWT’s certified experts. Attendees will obtain a clear understanding of WWT’s proven cloud automation solutions within the Next-Generation Data Center. We will level set expectations for enabling cloud computing as well as illustrate how vRA can drive business agility by automating the delivery of personalized IT services. WWT experts will provide attendees with a follow-up, high-level action plan based on the workshop’s key topics.

Work Directly with WWT Experts to:

1. Understand the cost saving benefits and architectural requirements of vRA
2. See multi-tenant, multi-cloud offerings demonstrated in the WWT Advanced Technology Center
3. Learn how to build and manage machine blueprints and add extensibility into vRA
4. Understand how to apply approval policies like business cost management and governance
5. Access hands-on lab exercises related to vRA

Capture cost savings and drive business agility
METHODOLOGY

WWT follows a consistent methodology for all service engagements, including workshops, assessments and professional services.

Our advisory services, provided during the Plan and Design phases of our methodology, are delivered by experienced technical solution architects with hands-on experience and thorough knowledge of provisioning clouds through a multi-tenant solution using heterogeneous hypervisors. They share their knowledge of industry-leading technologies, as well as how to integrate them according to best practices, to take public, private and hybrid clouds from concept to reality.

Our PDIO approach provides a clear roadmap of what you can expect when working with WWT and helps ensure the success of your VMware Cloud Automation Center project. Next steps may include a focused workshop or assessment, technical solution demonstrations, proof of concept or development of a client-specific design. WWT’s solutions-based, holistic approach uses best-of-breed technology based on your business or mission needs and existing data center infrastructure.

WWT’S TECHNOLOGY PARTNERS

WWT is uniquely qualified to help you address the technical and business requirements of public, private and hybrid clouds. By incorporating a holistic approach to cloud computing and automation, WWT provides a comprehensive OEM solution portfolio focused on designing and deploying cloud-based solutions. As part of this workshop, WWT will provide a live demonstration of the vRA solution using our Advanced Technology Center and draw on powerful partnerships and certifications from a wide variety of OEMs, including:

- Cisco Systems
- VMware
- Citrix
- EMC
- Microsoft
- NetApp
- HP

WHAT TO EXPECT

- Highly skilled engineers
- Hands-on access to emerging technology
- Customized technical and strategic whiteboard session
- Best practices
- Expert insight
- Use cases and success stories

WHO WE ARE

World Wide Technology (WWT) brings a highly collaborative, innovative and proven approach to how organizations discover, evaluate, architect and implement transformational business solutions.

Our customers have hands-on access to cutting-edge networking, mobility, collaboration, security, compute and cloud, storage, big data and software in our Advanced Technology Center; technical expertise from our expansive team of engineering resources; and accelerated global product delivery, powered by a sophisticated supply chain management infrastructure.

By working with a financially strong, privately held systems integrator with nearly $7B in annual revenue that ranks among the top tier of partners such as Cisco, HP, EMC, NetApp, VCE, F5 and VMware, our customers realize the benefits of saving time and money, while significantly minimizing risk.
