TECHNOLOGY RUNS ON
GREAT PEOPLE
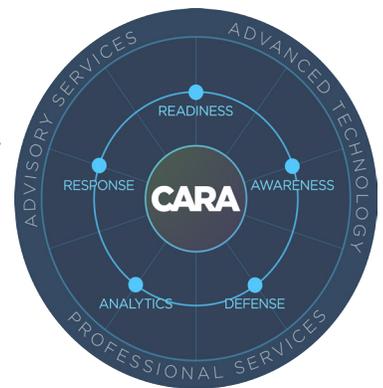

SECURITY ASSESSMENT

▶ OVERVIEW

WWT's comprehensive security assessments are a formal, detailed, yet flexible method of evaluating security program maturity, business and technical risk, alignment with standards and compliance posture. These reports are intended for both executive and line management. Objectives include:

• To evaluate and determine compliance with ISO 27002, HIPAA, PCI, NIST, NERC- CIP and other standards, frameworks and regulations
• To assess how technology and operational risks are managed and controlled
• To evaluate the overall risk exposure of the company and its clients
• To compile and summarize information about the overall maturity level of an information security program
• To summarize existing controls

The standards and regulations used for this assessment set forth requirements and provide guidance on the management of information security. Recommendations from this standard should be selected and used in accordance with applicable laws and regulations.

▶ BENEFITS

Clients who participate in a WWT Security Assessment gain a comprehensive understanding of their security program maturity and walk away with prescriptive recommendations to mitigate identified risks or control gaps. WWT will work with organizational stakeholders to assign risk ratings or priorities for assessment findings. These ratings or priorities will formulate a corrective action plan that can be used to set goals and objectives for security program enhancement.

RADAR Offerings

READINESS	AWARENESS	DEFENSE	ANALYTICS	RESPONSE
Understand the Security Posture	Total Visibility	Optimize the Defense Capabilities	Understand the Unknown	Respond and Adapt
Assessments	Security Awareness	Next-Gen Firewalls	Advanced Analytics	Breach Readiness
Readiness Reviews	Social Engineering	Network Access Control	Big Data	Incident Response
Governance, Risk and Compliance	Threat Intelligence	Cloud Security	Forensics	Response Testing
Secure Programs	Malware Analysis	End-point Security	Visualization	Adaptive Learning

⊳ METHODOLOGY

Grounded in advanced concepts, technologies, solutions and reference architecture, WWT's RADAR methodology can be customized and delivered to meet an organization's specific cybersecurity needs.

We have subject matter expertise and offerings that align to each RADAR domain. Some examples of our RADAR offerings are listed above.

⊳ WWT'S TECHNOLOGY PARTNERS

WWT is uniquely qualified to help you address today's cybersecurity challenges. Our expertise in state-of-the-art cybersecurity technology provides a holistic approach for true enterprise security management. We understand the importance of enterprise security and use a completely integrated approach because we understand that only a comprehensive solution will allow you to invest where it matters most and maximize your technology investments.

WWT has the depth of knowledge and demonstrated track record of deploying and supporting a diverse portfolio of solutions. Moreover, WWT's professional services engineers, consulting service engineers, cybersecurity architects and subject matter experts provide end-to-end services and support. They draw on industry certifications from a wide range of OEMs including (but not limited to):

- Cisco
- Palo Alto
- Splunk
- F5
- Tanium
- Checkpoint
- Fortinet
- Phantom Cyber
